

MySQL test

1. Give me two reasons why journalists use MySQL instead of a spreadsheet like Excel?
2. How many records can MySQL accommodate?
3. A query in MySQL needs at least two statements. What are they?
4. Download the crime [dump file](#) from the syllabus and import the table into MySQL.
5. Run the following queries: count the number of records; select the entire table and export it to a folder; filter the table for only cannabis-related crimes and export it;
6. BONUS QUESTION: SUM and group the number of cannabis-related crimes by year, and sort summed violations in descending order
