MySQL test

1. What's the difference between MySQL and a spreadsheet?
2. How many records can MySQL handle?
3. What are the first two clauses in a select query?
4. What is a view?
5. Create a view using the "union all" query for the years 2010 to 2014, and then save and export the table as a csv file.
6. From that view, select a table that contains the following columns: DATE_NEW, "STREET" and "TOTAL_FINES_AND_FEES". Sort the fines in descending order. Then save and export the table as a csv file.
